Stamp 1G (Third Level Graduate Programme) – application submitted September 2026

PROFILE

Data graduate with an M.Sc. in Financial Data Science (2:1, UCD Michael Smurfit Graduate Business School) and a B.Tech. in Computer Science Engineering (Data Science), with hands-on Azure experience. Builds data products end to end: Python and SQL pipelines, Power BI dashboards and data models, and data-quality controls proven across 100,000+ transactions. Moved from India to Dublin and from computer science into financial data science, adapting fast. Stamp 1G application submitted September 2026.

EDUCATION

AUGUST 2025–SEPTEMBER 2026

M.SC. IN FINANCIAL DATA SCIENCE, UCD MICHAEL SMURFIT GRADUATE BUSINESS SCHOOL, DUBLIN

- Graduated with a 2:1 (Second Class Honours, Grade 1).
- Modules: Financial Econometrics, Quantitative Methods, Financial Analysis, Capital Markets, Portfolio & Risk Management.
- Capstone: built a Python forecasting and valuation model on 10 years of data, stress-tested with scenario and sensitivity analysis (see Projects).

JULY 2021–JUNE 2025

B.TECH. IN COMPUTER SCIENCE ENGINEERING (DATA SCIENCE), HINDUSTAN INSTITUTE OF TECHNOLOGY AND SCIENCE, CHENNAI

- Graduated with 87% overall and an Honours specialisation in Cybersecurity.
- Studied cloud infrastructure with hands-on Microsoft Azure work across compute, storage, data pipelines and security (see Projects).

TECHNICAL SKILLS

- **Programming & Data:** Python (pandas, scikit-learn), SQL, R.
- **BI & Data Products:** Power BI (dashboards, data models, scheduled refresh), Tableau, Advanced Excel (pivot tables, VLOOKUP).
- **Data Engineering & Quality:** ETL / reporting pipelines, schema design, data validation & reconciliation, audit trails, data governance.
- **Cloud & Security:** Microsoft Azure (virtual machines, cloud storage, data pipelines, networking, access control); cybersecurity (Honours specialisation).
- **Analytics & Modelling:** forecasting and feature engineering (rolling averages, lag variables), scenario & sensitivity analysis, DCF / NPV modelling.
- **Other:** Tally ERP, Google Sheets, AI-assisted data analysis, Microsoft Office.

WORK EXPERIENCE

JANUARY 2026–PRESENT

RESEARCH ASSISTANT, GREENWATCH, UNIVERSITY COLLEGE DUBLIN (SFI-FUNDED RESEARCH INITIATIVE)

- Designed a config-driven Python data model that standardises KPIs reported in inconsistent formats, units and methodologies, so new data sources onboard through a mapping change rather than new code.
- Built automated validation and reconciliation checks that catch missing, contradictory or unsourced values before they reach analysis.

- Extract KPIs and sustainability targets for 50+ global bond issuers and deliver MI summaries of trends and deviations to research leads against concurrent deadlines.

2025 (JANUARY-JULY)

DATA ANALYST, SNIPER SYSTEMS AND SOLUTIONS (IT DISTRIBUTION)

- Delivered automated Power BI dashboards tracking monthly turnover and sales contribution across 4+ sales teams, using Python automation to cut manual reporting effort and shorten forecast cycles by c.25%.
- Engineered SQL data-quality controls to detect duplicates and validate transaction codes against master reference tables, flagging orphan records for review to keep a full audit trail.
- Partnered with the finance team to reconcile 100,000+ Tally ERP transactions, building logic that converted pre-tax data to post-tax, post-discount figures using vendor-specific rates.
- Improved the accuracy of revenue figures used by senior decision-makers by c.15% by separating vendor incentives and rebates from sales and excluding refunded transactions.
- Presented MI reports and year-end revenue trends to leadership as decision-ready insights.

2023 (FEBRUARY-MARCH)

AI & ML INTERN, HILITE TECHNOLOGY

- Built Python data-preparation pipelines and engineered time-series features (rolling averages, lag variables) that improved forecast accuracy by over 10% for models used in resource planning.

PROJECTS

2024-2025

AUTOMATED REPORTING PIPELINE & DATA CONTROLS, (PYTHON, SQL, POWER BI)

- Built an end-to-end pipeline (Python transformation, SQL aggregation, Power BI with scheduled refreshes) with automated null, duplicate and data-type controls, cutting manual reporting time by c.35% and ensuring only complete, accurate figures reached reports.

2021-2025

CLOUD INFRASTRUCTURE PROJECT, (MICROSOFT AZURE, B.TECH.)

- Provisioned and configured Azure virtual machines to run workloads in the cloud, applying core infrastructure-as-a-service principles.
- Built cloud data storage and a data pipeline on Azure to ingest, store and move data.
- Configured virtual networking, security rules and access permissions so that only authorised users and services could reach resources.

SEPTEMBER 2026-PRESENT

AIRPORT PERFORMANCE DATA MODEL & CAPITAL APPRAISAL, (EXCEL, POWER BI)

- Building a data model of daa's published annual report, analysing revenue and cost drivers across aviation, commercial and travel retail segments with variance analysis.
- Developing an NPV/IRR appraisal of a hypothetical airport investment, stress-testing passenger volumes, costs and discount rates to show how demand shifts change returns.

2025-2026

M.SC. CAPSTONE: FORECASTING & SCENARIO MODELLING, (PYTHON, EXCEL)

- Built base, optimistic and pessimistic forecasts across 10 years of data; sensitivity testing identified growth as the main value driver; results presented to non-technical stakeholders.

LEADERSHIP, CERTIFICATIONS AND INTERESTS

NOMINATION COMMITTEE MEMBER, STUDENT PROGRAMMING CLUB

- Worked with fellow committee members to deliver 14+ technical seminars for 300+ students.

2021-2024

ORGANISER, BLOOD DONATION DRIVES (FOUR CONSECUTIVE YEARS)

- **Certifications:** Python for Data Science (Kaggle); Cybersecurity Workshop (IIT Madras / Supraja).
- **Interests:** chess, roller skating and badminton.
